Professional Summary

I am a highly driven, aspiring software developer with an insatiable hunger for knowledge, who is able to add value to every project I am part of. I have spent the last year working in full-stack JavaScript land, focusing on React and Node.js. One of my biggest strengths is the knowledge and acceptance of my weaknesses. I am constantly working on my own projects to increase my knowledge and experience.

Technologies

HTML ⋅ CSS ⋅ Javascript ⋅ Node.js ⋅ React.js ⋅ Redux ⋅ Draft.js ⋅ Immutable.js ⋅ Ruby on Rails ⋅ SQL ⋅ MongoDB ⋅ DocumentDB ⋅ stored procedures ⋅ git ⋅ Heroku ⋅ Azure ⋅ Photoshop ⋅ SEO

Experience

OCTOBER 2016 - PRESENT
AgileThought, Tampa – *JavaScript Developer*

- Made significant contributions on a very large project that was a cloud based, consuming an ASP.net Web API on Azure, using the 'Command Pattern' to fulfill REST requests.
- Started, lead, and proved out a team focusing on reusable components which directly lead to increased velocity across all teams. Improved overall code quality, test coverage, and developer experience..
- Owned several important features with a focus on reusability and 'inner-source' practices. These features were very flexible, and one in particular was reused to the point that it serviced over half of the application's functionality.
- Designed and implemented a dynamic form engine using Redux-Form that enabled developers to describe the layout of the form with JSON, rendering a working form with validation and auto-save capabilities without writing a single line of code.
- Helped establish standards and core libraries to be used project and company wide. The main core library was a collection of React components to be consumed by other teams on the project with the explicit goal of writing the components in a manner that would not only be performant, but would serve as the basis for how to develop components in the project.
- Stayed current on JS changes and spread knowledge throughout the project. Constantly introduced other front end developers to current best practices, hosted a weekly JavaScript meeting to ensure that all of the front end developers were coordinating work.
- Assisted in developing a forked version of create-react-app to enable teams to spin up new projects with built-in scripts for testing, linting, sym-linking, and dev/prod builds.

- Javascript libraries used: *React, Redux, reselect, redux-saga, Lodash, Immutable, Draft, fixed-data-table, Redux-Form, node, express, hapi, joi, commander*, and others.
- Technologies used: JavaScript, ASP.net, Azure, DocumentDB, Git,

JUNE 2016 - OCTOBER 2016
Mercury New Media, Tampa – *Developer Technician*

- Worked on Node.js and React.js full time. Pioneered React at the company by rewriting an internal employee payroll application (originally written in Angular 1.x).
- Quickly became a vital part of small team leading the company into full stack javascript.
- Owner of a Full Stack Javascript/React Native cross-platform eCommerce application. Wrote a RESTful Node.js API that was consumed by a React web app and React Native android/iOS applications. Included a user authentication, shopping cart, and admin area.

APRIL 2016 - JUNE 2016
WeVue, Tampa – *Intern Ruby on Rails Developer*

- Committed code throughout the stack on a ROR application. Helped implement a web api that was consumed by android and iOS apps.
- Coordinated with Owners, Designers, and other Developers on multiple projects
- Performed QA testing developed QA scripts for both manual and automated testing.
- Created transactional email templates, wired up email service using SendGrid's API.
- Coordinated bug track between Rails, iOS, and Android teams.

JUNE 2013 - JUNE 2016
J Alexander's, Tampa – *Server*

- Provide remarkable service in high volume fine dining steakhouse.
- Consistently exceed sales goals by effectively managing sections and dining experience.
- Was a shift-leader for the last year of employment.

APRIL 2010 - OCTOBER 2011
Ray's Rides, Tampa – *Owner / Operator for Shuttle Service*

- Provided transportation to Major League Baseball fans in the Tampa Bay Area.
- Developed successful business model on needs of customer base in the community.
- Utilized networking skills to partner with local businesses for marketing purposes.
- Ultimately partnered with the Tampa Bay Rays and Escot Bus Lines.
- Raised initial investment capital.

Education

JANUARY 2006 - MAY 2007
Florida Institute of Technology, Melbourne, FL – *Undergrad*

Studied Engineering for two years while playing division 1AA baseball.

A Few Things I'm Proud Of

WeVue

wevue.com

First project; completely rebuilt notification generator for emails.

Personal Website

jordansrhodes.com

Personal website, mostly HTML and CSS, with some JavaScript modals. Links to professional info.

E-commerce site for an e-liquid manufacturer

coilbutter.com

Built on wordpress, freelance project, very successful marketing campaign.
